

Web Design – An Overview

Web design is the practice of planning, creating, and arranging the visual and interactive elements of a website so it looks good, works smoothly, and is easy for people to use. It combines creativity, psychology, and technical understanding to shape how users experience a site.

Visual Design

Focuses on how a website looks.

- 1 Colour theory – Understanding how colors work together and affect emotions.
- 2 Modern color palettes – Choosing harmonious, professional-looking combinations.
- 3 Typography – Selecting readable, attractive fonts that match the brand's tone.

User Interface (UI) Design

UI is about how users interact with the site.

- 1 Button styles
- 2 Navigation menus
- 3 Layout and spacing
- 4 Visual hierarchy

User Experience (UX) Design

UX focuses on how users feel when using the site.

- 1 Ease of finding information
- 2 Fast loading
- 3 Logical and smooth process

How It All Comes Together

Web design blends aesthetics, functionality, and usability. A well-designed website communicates clearly, builds trust, and helps users achieve their goals.
